Front Page of Answer Book

Enrollment Number:

2	0	1	9	B	T	C	S	0	8	8
---	---	---	---	---	---	---	---	---	---	---

Name of Student: YASH GUPTA

Name of Program: B. TECH

Year/Semester: 2ND YEAR/3RD SEMESTER

Name of Paper: Management Information System Paper Code: BTCS03CCB1

Date: 19th-JULY-2021

Day: THURSDAY

Time: 11:20 AM – 12:20 PM

Total No. of Pages.:12

Instructions for Examinees

1. Fill up all entries required in this page.
2. Merge this doc page with your scanned answer sheets as a first page in a single PDF file.
3. Write your answers on A4 Ruled Sheets/Register Pages.
4. Write End after the last attempted question.
5. Write the page number on every page and mentioned Total No. of Pages on front Page.
6. **If the content in the Answer Book of two students or more has found similar, in that case all copied answer will stand cancelled.**

PRACTICAL ACTIVITY

PRACTICAL - ACTIVITY - 02

1. TITLE: Data visualization in MS-Excel

2. AIM/OBJECTIVE: The objective of this practical activity is to:-

- ↳ (a) : Why we humans need to visualize data?
- ↳ (b) : What do we mean by Data visualization?
- ↳ (c) : Use case of Data visualization in Excel.
- ↳ (d) : Implementing different kinds of charts in MS-Excel.

3. METHODOLOGY: As we have various kind of charts which we use for visualizing our Data in MS-Excel

As we have taken one example related to "Display the sold quantities against the sales per year".

↳ Step ①: Open MS-Excel software. Create one ~~new~~ ~~database~~ workbook. Then import dataset from Internet.
(Site: <https://www.gurug.com>)

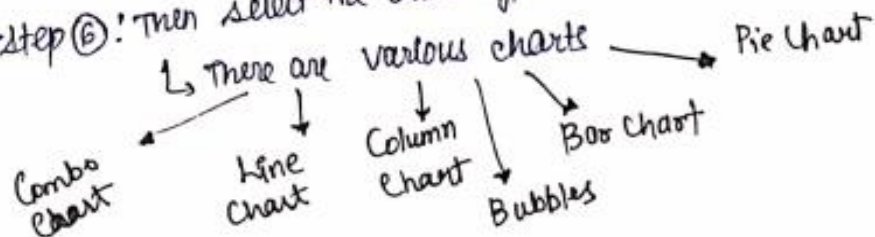

↳ Step ②: Enter the data from data source { In our case above website }

↳ Step ③: First select the datatable, which we want to represent in graph.

↳ Step ④: Then click on INSERT tab from the ribbon bar.

↳ Step ⑤: Under the Columns click on the column chart drop down button.

↳ Step ⑥: Then select the chart type we want.

4. BRIEF DESCRIPTION : (Humans perceive vision)

→ we can very easily visualize rather than doing computation like computers. Hence,

we (Humans) are more comfortable with the visuals.
Now Here, visualizing the data → provides a very deep insight about dataset.

These combined sets of data in visuals is known as

CHART.

→ A chart is a visual representative of data in both columns and rows.

Charts are usually used to analyse the trends & patterns in data sets. Using charts, we can easily tell which year had the most sales and which year had the least.

→ Importance of charts : → It is easier to analyse trends & patterns using charts in MS Excel.

→ It allows us to visualize the ~~chart~~ data graphically.

→ Easy to interpret compared to data in cells.

→ Chart Type : → When ~~you~~ ^{we} want to quantify items & show them as percentages.

↳ (Pie chart)

↳ (Bar chart) → When ~~you~~ ^{we} want to compare values across a few categories. The values run horizontally.

↳ (Column chart) → When ~~you~~ ^{we} want to compare values across a few categories. The values run vertically.

↳ (Line chart) → When we want to visualize trends over a period of time i.e. months, days, years etc.

↳ (Combo chart) → When ~~you~~ ^{we} want to highlight different types of information.

SELECTING FIELDS OF OUR DATA TABLE:

Item	Sale(2012)	Sale(2013)	Sale(2014)	Sale(2015)
Computers	20	12	13	12
Laptops	34	45	40	39
Monitors	12	10	17	15
Printers	78	13	90	14

SKILL ACTIVITY

SKILL ACTIVITY-DI

Title: Creating Pivot Chart in MS-Excel

1. What is the purpose of this Activity? (Explain in 3-4 lines)

The purpose of this activity is to create a pivot table in MS-Excel. A pivot table allows you to extract the significance from a large, detailed data set.

Following use cases can be solved by Pivot Table:

- ↳ a. Sort information by category easier.
- ↳ b. Compare information in seconds.
- ↳ c. Time saver
- ↳ d. Interactive Data Analysis

2. Steps performed in this Activity. (Explain in 5-6 lines)

Steps performed to insert a Pivot Table:-

↳ Step ①: Click any single cell inside the dataset.

↳ Step ②: On the Insert Tab, in the Tables group, click PivotTable.

↳ Step ③: Excel automatically selects the data for you. The default location for a New pivot table is New Worksheet.

↳ Step ④: click OK. Then to get the total amount exported of each product, drag the following fields to the different areas:

- a. Product field to the Rows area.
- b. Amount field to the Values area.
- c. Country field to the Filter area.

1/2 Dimensional Pivot Table } Step ⑤: If you drag a field to the Rows area & Columns area you can create a two-dimensional pivot table. First, insert a pivot table. Next, to get the total amount exported to each country, of each product drag the following fields to the different areas.

1. Country field to the Rows area.
2. Product field to the Columns area.
3. Amount field to the Values area.
4. Category field to the Filter area.

3. What resources/equipment/tools did you use for this activity?

a. Microsoft Excel (version 2105)

b. Laptop/Computer

c. Realworld Dataset from Internet

4. What skills did you acquire?

a. We get to know how Pivot Table works (Behind the scene calls COUNTIFS(), SUMIFS() & SUMPRODUCT()).

b. How to create 2D Table pivot chart?

c. Realworld use cases of pivot chart in MIS data analysis

5. Time taken to complete this activity? 02:00 (HOURS)
